

# Adjustment of Requirements

| Payment Options  | Product-line  |
|--|---|
| <p>Original</p> <p>Sales from the company to their employees are to be made through their payroll with a 20% discount. Sales to customers must be possible using either invoice, credit card or PayPal.</p>  | <p>Original</p> <p>The platform-software is included in every product. Additionally, every product contains individual characteristics as configuration or newly developed software.</p>  |
| <p>Adjusted</p> <p>Whenever an employee buys an item, the payment system must be able to add his transactions with the applied discount to his payroll. After a bidder won an auction, the payment system must give the option to the bidder to choose his preferred payment method being either invoice, credit card or PayPal for his transaction.</p> | <p>Adjusted</p> <p>The platform-software is included in every product of the e-commerce-suite auctioning product-line. Every product of the e-commerce-suite auctioning product-line has individual configuration or product-specific developed software.</p>                                       |
| <p>Change and Reasoning</p> <p>Multiple requirements mashed together in a single one.<br/>-&gt; Sensibly split into multiple ones Reformatted the sentences.</p>   | <p>Change and Reasoning</p> <p>Multiple requirements mashed together in a single one. -&gt; Sensibly split into multiple ones Specify unquantifiable words to what is logically meant by them.</p>  |
| Security   | Reusing of Assets   |
| <p>Original</p> <p>The online-auctioning-platform must implement modern security standards.</p>  | <p>Original</p> <p>Existing frameworks and components from the online-shop-software must preferably be reused.</p>  |
| <p>Adjusted</p> <p>The online-auctioning-platform must be secure against the latest OWASP top ten.</p>   | <p>Adjusted</p> <p>The payment- and the authentication system from the online-shop-software must be reused.</p>   |
| <p>Change and Reasoning</p> <p>Not specific enough (does modern mean 2015 or last month?)</p>  | <p>Change and Reasoning</p> <p>Without specification of the reusable assets, nothing will be reused properly.</p>   |
| Payment-Processor  | Quality   |
| <p>Original</p> <p>The online-auctioning-platform allows for the flexible implementation of a payment-processor like Saferpay or Datatrans.</p>  | <p>Original</p> <p>Additionally, it is very important for the management and the product manager, that the first release of the online-auctioning-platform is of high quality and timely delivered to the client. The functionality can still be rather modest upon consulting with the client.</p> |
| <p>Adjusted</p> <p>The online-auctioning-platform implements Saferpay as a payment-processor.</p>  | <p>Adjusted</p> <p>It is very important for the management and the product manager, that the first release of the online-auctioning-platform has few, but well implemented core functionality.</p>  |
| <p>Change and Reasoning</p> <p>This requirement is not specific enough to get a good picture of what should be implemented.</p>  | <p>Change and Reasoning</p> <p>This requirement makes it unsure, if the release should be an MMP or an MVP. It is better to specify which functionality should be implemented, because it wont otherwise be how the client wants it to be.</p>  |
